Sequence 7, Application US/08311731A
Patent No. 6583266
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAC, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR THIE OF INVENTION: DIAGNOSTICS AND THERAPBUTICS
NUMBER OF SEQUENCES: 411
                                                                                                                                                                                                                                                                                                                                                                                                                                                  SOFTWARE: Patentin Release #1.0, Version #1.25

2002-351711/38. WPI; 2002-351711, N-PSDB; AAD35510 Producing carotenoid compounds e.g. antheraxanthin and astaxanthin, by using microorganisms having a nucleic acid molecule encoding enzymes in the carotenoid biosynthetic pathway and which metabolize single carbon substrates.

Claim 25; Page 136-137; 156pp; English.

The invention relates to a method for producing carotenoid compounds. The method comprises a transformed metabolising host cell, comprising suitable levels of isopernenyl pyrophosphate and a nucleic acid molecule encoding an enzyme in the carotenoid biosynthetic pathway, under the control of regulatory sequences, and contacting the host cell with carbon substrate to produce a carotenoid compound. The method is useful for producing carotenoid compounds such as antheraxanthin and astexanthin, by using microorganism having a nucleic acid molecule encoding enzymes in

N

```
the carotenoid biosynthetic pathway and which metabolise single carbon substrates. The carotenoids have potent anti-oxidant properties useful in diet, and aquaculture elements. The carotenoids are also useful as intermediates in the synthesis of steroids flavours and fragrances and compounds for potential electro-optic applications. The present sequence is Pantoea stewartii zeaxanthin glucosyl transferase (CrtX) enzyme used
                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                          VAEASGLPFVSVACALFLNREPGLPLAVMPFEYGTSDAARBRYTTSEKIYDWLMRRHDRV 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ठे
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes Pantoea stewartii carotenoid biosynthetic enzymes (1). More specifically described are the geranylgeranyl pyrophosphate synthase (crtB), zeazanthin glucosyl transferase (crtX), lycopene cyclase (crtX), phytoene desaturase (crtI), phytoene synthase (crtB) and beta-carotene hydroxylase (crtZ) enzymes (see ABP96685 to ABP96680) encoded by ACC44759 to ACC44764. (1) can be used for regulating carotenoid biosynthesis in an organism, by over-expressing (1) in an organism. (1) and the genes encoding (1) are useful for converting phytoene to the carotenoids, for creating recombinant organisms that have the ability to produce various carotenoid compounds, and also for enhancing or manipulating carotenoid compounds. (1) can also be used for producing gene products having enhanced or altered activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PGSLSHLIHLAAHPLGPSMLRLINEMARTSDMLCRELPAAFHALQIEGVIVDQMBPAGAV 120

                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a protein involved in carotenoid biosynthesis. The specification describes astaxanthin diglucosides and adonixanthin-3'-glucosides. The specification also describes a method for the preparation of a carotenoid glycoside, in Which all, or part of, carotenoid biosynthesis genes crtE, crtB, crtI, crtY, crtZ, crtX or crtW are introduced to a microbe or plant and expressed. The transformed organism is cultured and astaxanthin diglucosides, adonixanthin-3'-glucosides, and/or astaxanthin monoglucoside are collected. The carotenoid glucosides are used as food additives. There are a total of six relevant genes in a 7900 bp region that cause E. coli cells to produce GGPP and the carotenoids phytoene through caxoarathin diglucoside, which is the final prod. identified in the carotenoid pathway contd. in plasmid pARG376 (contg. a ca. 13 kb chromosomal DNA fragment isolated by Perry et al., J. Bacteriol. 168:607 (1986). The genes for geranjugaranty pyrophosphate (GGPP) synthase, phytoene synthase, phytoene dehydrogenase-4H, lycopene cyclame, betacarotene hydroxylase, and zeaxanthin glycosylase are represented in ARG13719, ARG13719, ARG13722, ARG13724 and ARG13726 in Espectively. Recombinant expression plasmids can be used to produce large amts. of the enzymes and hence large amts. of the carotenoids which they synthesise. (Updated on 25-MAR-2003 to correct PR field.) ```
aglycones. The polypeptides can be expressed by standard recombinant methodology. The gene and the encoded polypeptides together with other enzymatically active polypeptides, are useful to perform combinatorial biocatalysis in vitro and in vivo in a host cell. They are useful for performing biotransformations on macrolide compounds including avermectin or other macrolide aglycones. The sequences are also useful in vivo in a bacterial host, in vitro in combination with an actinomycete polypeptides that are not from the avermectin biosynthetic pathway to effect the synthesis of a pharmaceutically active compound, e.g. an antibiotic. Sequences AABS1973-981 represent polypeptides in the avermectin biosynthetic pathway, involved in the synthesis and/or addition of oleandrose to avermectin aglycones. The present sequence is the S. avermetilis ORF2 (AvrB) polypeptide having the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             213

The present invention relates to the isolation of the Micromonospora echinospora spp. calcichensis calicheamicin biosynthetic gene cluster encoding proteins and enzymes used in the biosynthetic production of calicheamicin, including aryltetrasacharide and adjycome. The gene cluster also includes the gene encoding for the protein that confers calicheamicin, resistance. The calicheamicin biosynthetic gene cluster is a nonchromoprotein enediyne biosynthetic gene cluster. Expression vectors containing genes from the biosynthetic gene cluster are also disclosed.

The expression vectors are useful for producing calicheamicin provides an approach for gene therapy, for example, by introduction of enediyne resistance genes into bone marrow cells, thus increasing resistance and allowing tolerance to chemotherapeutic doses of calicheamicin. The invention relates to the isolation of genes and their encoded corteins from Photorhabdus luminescens. The isolated sequences are proteins from Photorhabdus luminescens. The isolated sequences are sources of probas and primers for detection; the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of the genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that compines or microorganisms other than P. luminescens and are able to alter response or sensitivity to coxins and antibiotics produced by P. creombinant production of the proteins, particularly toxins and carried antibacterials useful as insecticides, bactericides and fungicides. The creombinant production of the proteins, particularly toxins and carried that the respective to P. luminescens end the proteins or antibiotics and as some constitute to P. luminescens and the proteins are also useful the properticides, bactericides and fungicides. The biopesticides, Other uses of the genes and the proteins are as virulence factors and for identifying tragets of human diseases for which P. contains a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antibacterial; fungicide; insecticide; polymorphism; genetic analysis; detection; food; gene expression; plant; animal; microorganism; toxin; antibiotic; biopesticide; virulence factor; disease model; plague;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5 AVIAPPFFSHVRALQNIAQELVARGHRVTFF------QQHDCKALVTGSDIGFQTVG

The butenyl-spinosyn biosynthetic genes are useful for increasing the production of butenyl-spinosyn insecticidal macrolides. The genes are also useful for changing the metabolites or products produced by spinosyn-producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New butenyl-spinosyn biosynthetic genes, useful for increasing the production of butenyl-spinosyn insecticidal macrolides, or for changing the metabolites or products produced by spinosyn-producing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB; ABL09015
```

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB10702). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

UDP-glucose:aglycon-glucosyltransferase; UDP-GAG; cyanohydrin; terpenoid; glucose; transgenic plant; cyanogenic glucoside biosynthesis; pathogen resistance; herbivore response.

Sorghum bicolor

WO200140491-A2

```
The present sequence represents a UDP-glucose:aglycon-glucosyltransferase (UDP-GAG) polypeptide. The enzyme conjugates a cyanohydrin, terpenoid, phenylderivative or hexanolderivative to glucose. UDP-GAG polymucleotides are useful for producing transgenic plants having modified cyanogenic glucoside biosynthesis. Constitutive, inducible or tissue-specific expression of UDP-GAG is useful for obtaining transgenic cyanogenic plants with altered resistance to pathogens and herbivore responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          109 -VIVDOMEPAGAVVARASGLP----PVSVACAL--PLAREPGLPLAVMPFEYGTSDAARE

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence unjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a method of predicting, diagnosing or prognosing a cardiovascular disease by detection of a polymuclectide in a biological sample comprises hybridising at least one of the polymuclectide to a nucleic acid material of a biological sample, thus forming a hybridisation complex, and detecting the hybridisation complex. The polymuclectides, polypeptides, antisense molecule, antibody and reagent are useful for preparing compositions for preventing, predicting or diagnosing, or a medicament for treating a cardiovascular disease, e.g. arteriosclerosis, ischemenia, angina pectoris, or myocardial infarction. This sequence represents a protein identified in the invention a being differentially expressed in individuals with cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ALQIEG-----VIVDQMEPAGAVVAEASGLPFVSVACALPLNREPG--LPLAVMPFR 152

aerocolonigenes (ATCC 39243). The glycosyl transferase (GT) may be from any organism of the order Actinomycetales. GT is used in a method of glycosylating indolopyrrolocarbazole derivs. Glycosylated indolopyrrolocarbazole derivs. are useful as anti-tumour agents. GTs can be made by recombinant means using new GT-producing strains Streptomyces lividans TX21 (pNGT207) FERM BP-5091 and S. morbaraensis BA 13793 (pNGT207) FERM BP-5091 and S. worbaraensis CA (field)

AAR93982 is a glycosyl transferase enzyme derived from Saccharothrix

- useful in glycosylation of

Gene coding for glycosyl transferase indolo:pyrrolo carbazole derivs.

polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g., spinal segmental nerve injury (Chung), chronic construction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g., gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Natl. Acad. Sci. U.S.A. 89:6761-6764(1992).
-!- CATALYTIC ACTIVITY: Trans-trans-farnesyl diphosphate + isopentenyl diphosphate = diphosphate + geranylgeranyl diphosphate.
-!- PATHWAY: Carotenoid biosynthesis.
-!- SIMILARITY: Belongs to the FPP/GGPP synthetase family.

-!- FUNCTION: Catalyzes the trans-addition of the three molecules of catalyzes the trans-addition of the three molecules of IPP onto DMAPP to form geranylgeranyl pyrophosphate.
-!- CATALYTIC ACTIVITY: Dimethylallyl diphosphate + isopentenyl diphosphate = diphosphate + geranyl diphosphate + isopentenyl diphosphate - diphosphate + trans, trans-farnesyl diphosphate.
-!- CATALYTIC ACTIVITY: Trans-farnesyl diphosphate + isopentenyl diphosphate + diphosphate + trans, trans-farnesyl diphosphate + isopentenyl diphosphate + geranylgeranyl diphosphate + isopentenyl diphosphate + geranylgeranyl diphosphate + isopentenyl by Trans-trans-farnesyl diphosphate + isopentenyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphosphate + geranylgeranyl diphospha

CATALYTIC ACTIVITY: Dimethylallyl diphosphate.

CATALYTIC ACTIVITY: Geranyl diphosphate.

CATALYTIC ACTIVITY: Geranyl diphosphate.

Alphosphate + trans.trans-farnesyl diphosphate.

CATALYTIC ACTIVITY: Trans-trans-farnesyl diphosphate.

CATALYTIC ACTIVITY: Trans-trans-farnesyl diphosphate.

CATALYTIC ACTIVITY: Trans-trans-farnesyl diphosphate.

PATHWAY: First committed step in carotenoid biosynthesis. Key enzyme in plant terpenoid biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             87 VNKALDSAVPLR-EPLKIHEAMRYSLLAGGKRVRPVLCIAACELVGGEESTA--MPAACA

-!- CATALYTIC ACTIVITY: Geranyl diphosphate + isopentenyl diphosphate - adiphosphate + krans.trans-farnesyl diphosphate.
-!- SUBCELLULAR LOGATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the PPP/GGPP synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-007-1996 (Rel. 34, Created)

the Bacillus subtilis genome containing the skin element and many
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nature 390:249-256(1997).

-!- CATALYTIC ACTIVITY: Geranyl diphosphate + isopentenyl diphosphate = diphosphate + trans, trans-farnesyl diphosphate.

-!- SUBCELUTAR LOCATION: Cytoplasmic.

-!- SIMILARITY: Belongs to the PPP/GGPP synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
